

LEO ENTERPRISE CLOUD SUITE

Visual Blueprints: Mandatory Diagrams and Image Architecture Map

1. Cloud Infrastructure Topology Diagram (High-Level Architecture)

Objective: This diagram models the complete DevSecOps flow, tracing how incoming user actions interact with your local files, Render cloud runtime nodes, and the remote AWS infrastructure bucket zones.

Recommended Visual Tool Mapping: Use **Draw.io** or **Lucidchart** with standard AWS icons (S3 bucket, IAM user keys, and lambda icons).

```
+-----+
-+ | 1. CLIENT LAYER | | [ User Workstation ] ---- (HTTPS / JSON Payload) ----> Router
Interface (/interface) | +-----+
-----+ | v +-----+
-----+ | 2. COMPUTE GATEWAY LAYER | | [ Render Cloud Host
Container Container ] | | |-- FastAPI Core Engine Routing Core | | |-- Environment
Variables Vault Security Wrapper (AWS_ACCESS_KEY_ID Masking) | +-----+
-----+ | +-----+

5. AUTOMATED STORAGE OPTIMIZER | | [ Background AWS Lambda Compression Loop ] | | |--
Performs Target Asset Shrunk Algorithm | | |-- Saves GZIP Archive (.gz) to S3 Area | +-
-----+
```

2. Relational Database Entity-Relationship Diagram (ERD Diagram)

Objective: This data architecture image models the structural design, constraint boundaries, and variable properties schemas mapping inside your local relational database file (lalith_office_audit.db).

```
+-----+ +-----+ |
office_logs | | project_ratings | +-----+ +-----+
```

```
-----+ | PK | id : INTEGER | | PK | id : INTEGER | | | user_name : TEXT
| | | user_name : TEXT | | | comment_text : TEXT | | | rating_value : INTEGER | | |
s3_path : TEXT | | | review_text : TEXT | | | security_status : TEXT | | | timestamp :
TEXT | | | timestamp : TEXT | +-----+ +-----+
-----+
```

3. Client Interface Dashboard UI Wireframe Map

Objective: This design wireframe charts out the graphical user interface elements layout running on your live frontend dashboard console. It maps input forms, reactive status bars, and real-time rating modules.

```
+-----+
+ | LEO ENTERPRISE CLOUD CORE DASHBOARD [ 4.8 / 5.0 * ] | | Architect: S. LALITH |

```

4. How to Integrate Your Custom Image Assets

When you design these diagrams inside your visual software platforms and export them as image assets, you can insert them seamlessly into your main HTML documentation using standard image container lines:

HTML Integration Snippet Example:

```

```
